

Project Design Phase-II Technology Stack (Architecture & Stack)

Date	31 January 3035
Team ID	
Project Name	
Maximum Marks	4 Marks

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example: Order processing during pandemics for offline mode

Reference: <https://developer.ibm.com/patterns/ai-powered-backend-system-for-order-processing-during-pandemics/>

Technical Architecture – ServiceNow Procurement Automation

ServiceNow Cloud Platform: Service Catalog → Flow Designer → automated request processing.

2	Application Logic-1	Captures and initiates the Standard Laptop service request.	ServiceNow Service Catalog
3	Application Logic-2	Automates the procurement workflow after submission.	ServiceNow Flow Designer
4	Application Logic-3	Performs the configured assignment step.	ServiceNow Flow Designer
5	Database	Stores ServiceNow request and workflow-related records.	ServiceNow Platform Data Store
6	Cloud Database	Handled by the ServiceNow platform; no separate DB is configured.	ServiceNow Platform
7	File Storage	No separate file-storage service is required.	ServiceNow Platform
8	External API-1	No external API is used in the demonstrated workflow.	Not Applicable
9	External API-2	No external API is used in the demonstrated workflow.	Not Applicable
10	Machine Learning Model	No machine-learning model is used.	Not Applicable
11	Infrastructure (Server / Cloud)	Application and automation run on the ServiceNow instance.	ServiceNow Cloud Platform

Table 2: Application Characteristics		Local Server Configuration:	Cloud Server Configuration :
--------------------------------------	--	-----------------------------	------------------------------

1	Open-Source Frameworks	No separate open-source application framework is used.	ServiceNow Platform
2	Security Implementations	Access and workflow execution use configured ServiceNow users, roles and permissions.	ServiceNow access controls
3	Scalable Architecture	Repeatable automated workflow reduces repeated manual processing.	Flow Designer
4	Availability	Solution runs within the ServiceNow cloud platform.	ServiceNow Cloud Platform

		USE OF MICRO-SERVICES ETC.	CONTROLS, CMMC2 ETC.
3.	Scalable Architecture	Justify the scalability of architecture (3 – tier, Micro-services)	Technology used
4.	Availability	Justify the availability of application (e.g. use of load balancers, distributed servers etc.)	Technology used
